HARDICRETE™ & HARDIPAVE™ are Resin Cementitious Grouted Macadams, providing a specialist surface course for airports and affiliated services, to withstand high turning forces, heavy loads and deformation.

These products are a hybrid between asphalt and concrete, giving a high strength surface course, laid at 40mm. Its hardwearing and durable properties ensure high end performance, minimal ongoing maintenance and minimal installation downtime.

Benefits include:

- Resistance to fuel spills
- Resistance to de-icing fluids
- Resistance to high turning forces
- Resistance to heavy loads
- Resistance to high surface temperatures

Our products have been installed on numerous airfields throughout the UK over the past 30 years.
